

Aerosol Technology: Properties, Behavior, and Measurement of Airborne Particles,

3rd Edition

William C. Hinds, Yifang Zhu

About the Author

William C. Hinds, ScD was an emeritus Professor in the Department of Environmental Health Science at the UCLA Fielding School of Public Health. His primary research was fundamental and applied research related to aerosols and industrial control of airborne contaminants. He was a diplomate of the American Board of Industrial Hygiene and a fellow of the American Industrial Hygiene Association, the American Association for Aerosol Research, and the International Aerosol Research Assembly.

Yifang Zhu, PhD is a Professor in the Department of Environmental Health Science at the UCLA Fielding School of Public Health. Her research is primarily in the field of air pollution, environmental exposure assessment, and aerosol science and technology. She was a recipient of the 2007 Walter A. Rosenblith New Investigator Award from the Health Effects Institute, the 2009 Faculty Early Career Development Award from the NSF, and the 2011 Haagen-Smit Prize from the Atmospheric Environment journal. She has published more than 120 peer-reviewed journal articles on aerosols.

Table of contents

Preface to the First Edition xi

Preface to the Second Edition xiii

Preface to the Third Edition xv

List of Principal Symbols xvii

1 Introduction 1

1.1 Definitions 2

1.2 Particle Size, Shape, and Density 5

1.3 Aerosol Concentration 8

2 Properties of Gases 15

2.1 Kinetic Theory of Gases 15

2.2 Molecular Velocity 18

2.3 Mean Free Path 20

2.4 Other Properties 21

2.5 Reynolds Number 24

2.6 Measurement of Velocity, Flow Rate, and Pressure 27

3 Uniform Particle Motion 37

3.1 Newton's Resistance Law 37

3.2 Stokes's Law 39

3.3 Settling Velocity and Mechanical Mobility 40

3.4 Slip Correction Factor 42

3.5 Nonspherical Particles 44

3.6 Aerodynamic Diameter 46

3.7 Settling at High Reynolds Numbers 47

3.8 Stirred Settling 54

3.9 Instruments that Rely on Settling Velocity 56

3.10 Appendix: Derivation of Stokes's Law 58

4 Particle Size Statistics 65

4.1 Properties of Size Distributions 65

4.2 Moment Averages 71

4.3 Moment Distributions 72

4.4 The Lognormal Distribution 77

4.5 Log-Probability Graphs 80

4.6 The Hatch-Choate Conversion Equations 84

4.7 Statistical Accuracy 88

4.8 Appendix 1: Distributions Applied to Particle Size 89

4.9 Appendix 2: Theoretical Basis for Aerosol Particle Size Distributions 90

4.10 Appendix 3: Derivation of the Hatch-Choate Equations 90

5 Straight-Line Acceleration and Curvilinear Particle Motion 97

5.1 Relaxation Time 97

5.2 Straight-Line Particle Acceleration 98

5.3 Stopping Distance 101

5.4 Curvilinear Motion and Stokes Number 104

5.5 Inertial Impaction 105

5.6 Cascade Impactors 110

5.7 Virtual Impactors 115

5.8 Time-of-Flight Instruments 117

6 Adhesion of Particles 121

6.1 Adhesive Forces 121

6.2 Detachment of Particles 123

6.3 Resuspension 124

6.4 Particle Bounce 126

7 Brownian Motion and Diffusion 129

7.1 Diffusion Coefficient 129

7.2 Particle Mean Free Path 132

7.3 Brownian Displacement 134

7.4 Deposition by Diffusion 137

7.5 Diffusion Batteries 141

8 Thermal and Radiometric Forces 147

8.1 Thermophoresis 147

8.2 Thermal Precipitators 151

8.3 Radiometric and Concentration Gradient Forces 153

9 Filtration 157

9.1 Macroscopic Properties of Filters 157

9.2 Single-Fiber Efficiency 163

9.3 Deposition Mechanisms 165

9.4 Filter Efficiency 169

9.5 Pressure Drop 174

9.6 Membrane Filters 174

10 Sampling and Measurement of Concentration 179

10.1 Isokinetic Sampling 179

10.2 Sampling from Still Air 185

10.3 Transport Losses 188

10.4 Measurement of Mass Concentration 189

10.5 Direct-Reading Instruments 192

10.6 Measurement of Number Concentration 195

10.7 Sampling Pumps 197

11 Respiratory Deposition 203

11.1 The Respiratory System 203

11.2 Deposition 206

11.3 Deposition Models 210

11.4 Inhalability of Particles 213

11.5 Respirable and Other Size-Selective Sampling 215

12 Coagulation 227

12.1 Simple Monodisperse Coagulation 227

12.2 Polydisperse Coagulation 233

12.3 Kinematic Coagulation 238

13 Condensation and Evaporation 243

13.1 Definitions 243

13.2 Kelvin Effect 246

13.3 Homogeneous Nucleation 247

13.4 Growth by Condensation 248

13.5 Nucleated Condensation 251

13.6 Condensation Particle Counters 255

13.7 Evaporation 257

14 Atmospheric Aerosols 265

14.1 Natural Background Aerosol 265

14.2 Urban Aerosol 269

14.3 Global Effects 274

15 Electrical Properties 277

15.1 Units 277

15.2 Electric Fields 278

15.3 Electrical Mobility 280

15.4 Charging Mechanisms 283

15.5 Corona Discharge 289

15.6 Charge Limits 291

15.7 Equilibrium Charge Distribution 292

15.8 Electrostatic Precipitators 294

15.9 Electrical Measurement of Aerosols 297

16 Optical Properties 305

16.1 Definitions 306

16.2 Extinction 307

16.3 Scattering 313

16.4 Visibility 317

16.5 Optical Measurement of Aerosols 322

17 Bulk Motion of Aerosols 333

Problems 92

References 94

18 Dust Explosions 339

Problems 92

References 94

19 Bioaerosols 345

19.1 Characteristics 345

19.2 Sampling 347

20 Microscopic Measurement of Particle Size 353

20.1 Equivalent Sizes of Irregular Particles 353

20.2 Fractal Dimension of Particles 358

20.3 Optical Microscopy 362

20.4 Electron Microscopy 365

20.5 Asbestos Counting 369

20.6 Automatic Sizing Methods 371

21 Production of Test Aerosols 375

21.1 Atomization of Liquids 375

21.2 Atomization of Monodisperse Particles in Liquid Suspensions 380

21.3 Dispersion of Powders 382

21.4 Condensation Methods 387

Appendices 391

Appendix A1. Useful Constants and Conversion Factors 391

Appendix A2. Some Basic Physical Laws 393

Appendix A3. Relative Density of Common Aerosol Materials (Multiply Values by 1000 for Density in kg/m³ and by 1.0 for Density in g/cm³) 394

Appendix A4. Standard Sieve Sizes 394

Appendix A5. Properties of Gases and Vapors at 293 K [20°C] and 101 kPa [1 atm]	395
Appendix A6. Viscosity and Density of Air versus Temperature	395
Appendix A7. Pressure (a), Temperature (b), Density (c), and Mean Free Path (d) of air versus altitude	396
Appendix A8. Properties of Water Vapor	397
Appendix A9. Properties of Water	398
Appendix A10. Particle Size Range of Aerosol Properties and Measurement Instruments: (a) Application Range for Aerosol Size Measuring Instruments and (b) Size Range of Aerosol Properties (See Also Fig. 1.6)	398
Appendix A11. (a) Properties of Airborne Particles at Standard Conditions (SI Units)	400
Appendix A12. Slip Correction Factor for Standard and Nonstandard Conditions: (a) Slip Correction Factor Minus One versus Particle Diameter and Standard Conditions; (b) Slip Correction Factor versus Particle Diameter Times Pressure (per atm) for Temperatures from 233 to 893K [-40 to 600 °C]	402
Appendix A13. Properties of Selected Low-Vapor-Pressure Liquids	403
Appendix A14. Reference Values for Atmospheric Properties at Sea Level and 293.15 K [20°C]	404
Appendix A15. Greek Symbols Used in This Book	405
Appendix A16. SI Prefixes	405
References	405
Index	407
